SERVICES FOR THE PROVISION OF ORBITAL DATA OF NEAR- EARTH SPACE OBJECTS

Guarding the cosmos for the world

Experience — Knowledge — Development — Reliability — Consistency

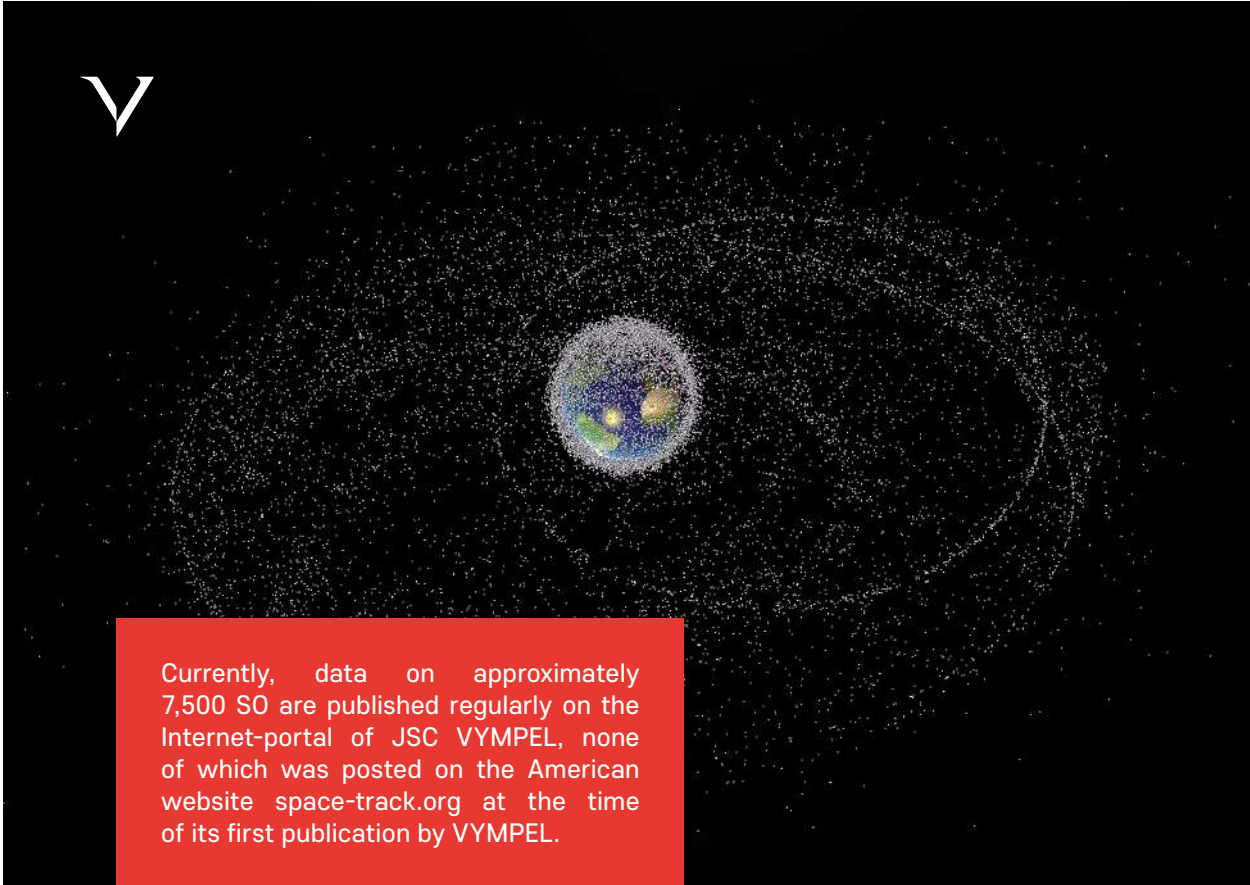

spacedata.vimpel.ru

The active use of space facilities and technologies in scientific research and in the real economy requires relevant and accurate information about space objects (SO).

JSC VYMPEL, the leading Russian company for near-Earth space surveillance, offers its partners a unique information resource that provides relevant data on the orbits of various SO. This resource is based on information on observations of SO obtained in real or quasi-real time from **more than 80 optical complexes** of its own and other organizations located in Russia and other countries, in Europe, Asia, America, Africa.

spacedata.vimpel.ru Open Internet portal of JSC VYMPEL providing orbital data on near-Earth space objects

Currently, data on approximately 7,500 SO are published regularly on the Internet-portal of JSC VYMPEL, none of which was posted on the American website space-track.org at the time of its first publication by VYMPEL.
